Academic Program and Course Description Guide

Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

Concepts and terminology:

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

<u>Course Description</u>: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

<u>Program Vision:</u> An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

Program Mission: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

Program Objectives: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure:</u> All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

Teaching and learning strategies: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

Approval of the Dean

1. Program Vision

The College of Veterinary Medicine seeks to be one of the leading higher education institutions at Tikrit University in the field of modern education and scientific research through its scientific, research and administrative activities. It also works to provide an integrated path for its students and professors to make them active and creative in serving the community in the fields of education.

2. Program Mission

Working to prepare and graduate leading scientific and leadership competencies in veterinary medicine and to develop the balance of knowledge in the field of scientific research to serve the local, regional and international community, as well as training and refining the minds of students scientifically and cognitively, and emphasizing social and cultural values and responding to the requirements of the local market.

3. Program Objectives

- 1- Knowledge and understanding of veterinary medicine and related local, regional and international standards
- 2- Scientific skills that enable diagnosing veterinary diseases and dealing with various pathological conditions in animals and treating them
- 3- Thinking and analytical skills that enable solving emerging problems in the field of livestock, common diseases and basic sciences, in accordance with local, regional and international standards.
- 4- Use and self-development skills that enable competition with others in the labor market..

4. Program Accreditation

Theoretical and practical study

5. Other external influences

Laboratories, animal field, library, Internet, and veterinary projects

| Program Structure | Number of Courses | Credit hours | Percentage | Reviews* |
|-----------------------------|----------------------|--------------|------------|--------------|
| Institution Requirements | 90 | 90 | | Basic course |
| College Requirements | Yes | | | |
| Department Requirements | Yes | | | |
| Summer Training | Yes | | | |
| Other | | | | |

9. Teaching and Learning Strategies

- 1-lecture
- 2- Discussion
- 3- Holding discussion circles
- 4- Holding training courses in the field of applications and practicality
- 5- Providing students with the basics and additional topics related to the previous learning outcomes of skills, to solve practical problems.
- 6- Applying the topics studied theoretically at the practical level in various branches of veterinary medicine.
- 7 Visiting practical laboratories by academic staff

10. Evaluation methods

- 1. Daily, monthly, and practical tests and the end-of-course exam to measure knowledge, understanding, and reasoning on the student's level of ability and understanding of the course vocabulary.
- 2. Scientific discussion sessions to measure the student's ability to present information and choose the appropriate answer
- 3. Preparing students for scientific reports by choosing topics of importance.
